

## Point Source Implementation Grant Program FY 2025 Applicants

The Point Source Implementation Grant (PSIG) program provides grants to local governments to upgrade water treatment facilities to meet more protective requirements to improve water quality. Eligible project costs are those necessary to meet wasteload reduction requirements under Total Maximum Daily Load (TMDL) implementation plans, to reduce the discharge of phosphorus or meet other water quality-based effluent limits, or to meet a total nitrogen concentration or mass limit that requires a discharge of ten milligrams per liter or less. The PSIG program provides grants for 80% of eligible costs up to a maximum of \$7,000,000.

Eligible projects must be listed on the Minnesota Pollution Control Agency's (MPCA) Project Priority List (PPL) and certified by the MPCA. To be certified the MPCA must approve the project plans and specifications. To the extent grant funds are available each year, PFA will reserve funds when a project is certified based on the eligible project cost estimate at that time or the as-bid costs, whichever is less. PSIG grants are awarded to certified projects when as-bid costs are submitted and any other necessary funding is secured.

Projects that are certified in a prior fiscal year but do not receive a grant award in that year, either because they have not completed the bidding process or because grant funds are not available, will be carried over to the following year based on their MPCA certification date, followed by new project applications in priority order. Applicants whose projects do not receive MPCA certification may reapply in the following year.

Current PSIG applicants are listed below in priority order based on MPCA's 2025 PPL and in order of their readiness to proceed based on MPCA certification date.

As of July 1, 2024 the PFA has \$79.5 million available for PSIG grants from state bonding and Clean Water Legacy Fund appropriations. The PFA will use available funds to award PSIG grants to eligible projects in order of project certification and priority order as shown below. Shaded rows indicate FY 2025 grant awards to date, shaded cells indicate estimated PSIG grant funds reserved pending final award. The dashed line indicates the fundable range of projects based on the available funds and estimated grant amounts.
